

Speedy Intelligent Safety Noise

As part of its 'Intelligent Safety' campaign, Speedy has created this infographic to illustrate the dangers of Noise and how to control and minimise the risk.

Noise is a BIG problem

ESTIMATED

20,000

people last year suffered from Noise Induced Hearing Loss

17,000

people in the UK suffer deafness, ringing in the ears or other ear conditions caused by excessive noise at work

85 decibels
is the safe exposure limit

and you should not exceed
8 hours a day

There were **48** cases of hearing loss per **100,000** people employed in the last **12 months** which although better than the corresponding rate **ten years earlier** of **68** cases per **100,000** people employed, is still too high.

Although there is some improvement during the last 10 years there is still a long way to go.

Noise level examples

RAINDROPS

40dB

CONVERSATION

60dB

CHAINSAW

110dB

FIREWORKS/FIREARMS

140dB

There is a full range of equipment available,
so use it!
